

**A decision information system for citrus**

by L.G. Albrigo and H.W. Beck

**Modeling transpiration in young cherry trees using a gravimetric lysimeter**

by A. Antunez, M. Whiting and C. Stockle

**DISC Citrus Planning and Scheduling Program**

by H.W. Beck and L.G. Albrigo

**Modeling *Stemphylium vesicarium* in pears**

by A. Boshuizen, P.F de Jong, B.Heijne

**Phenological and Climatic Simulation on the Appearance of Damages Caused by Late Frosts in Cherry and Sour Cherry in Romania**

by E. Chitu and Cr. Paltineanu

**Simulating the architectural development of apple trees**

by M. Renton, E. Costes, Y. Guédon and C. Godin

**L-PEACH, an L-Systems Based Model for Simulating the Architecture and Physiology of Growing Fruit Trees**

by M. Allen, T. DeJong and P. Prusinkiewicz

**Modeling Carbon Allocation Below Ground**

by David Eissenstat, Penn State University

**Sopra: A Decision support tool for insect pest management in Apple on the World wide web**

by B. Graf, H.U. Höpli and H. Höhn

**Modeling mango fruit and vegetative growth**

by Y.L. Grossman, A. González and E.W. Pavel

**Modelling fruit development in “Hayward” kiwifruit**

by A.J. Hall, A.C. Richardson and W.P. Snelgar

**The DTS accumulation model for predicting the flowering date in Japanese pear trees in Japan**

by Hitoshi Honjo, Ryo Fukui, Yasuyuki Aono and Toshihiko Sugiura

**Modeling Water Use of an Apple Orchard in the Humid Climate of the Northeastern US**

by D. Dragoni, A.N. Lakso, and R.M. Piccioni

**Improvements on an Apple Carbon Balance Model**

by Alan.N. Lakso, Duane W. Greene and John W. Palmer

**The trunk cross-section area as a basis for fruit yield modelling in intensive apple orchards**

J. Lepsis and M. M. Blanke

**Mid season prediction of fruit size distribution of ‘Golden Delicious’ apples in South Africa**

Oloff Bergh and Elmi Lötze

**Parameterization of the functional-structural RATP model on apple trees, application to simulate photosynthesis and transpiration of fruiting branches.**

by C. Massonnet, J.L Regnard, H. Sinoquet, T. Améglio and E. Costes.

**Toward a better interpretation and use of thermal time models.**

F. Normand and M. Léchaudel

**Modelling grapevine responses to different training systems**

by Giovan Battista Mattii, Simone Orlandini and Anna Dalla Marta

**An Estimation Model of the Climatic Rating in the Golden Delicious Apple Cultivar in the Southern Part of Romania**

by Cr. Paltineanu and E. Chitu

**Modelling the diameter of annual shoots in a three-year-old fruiting branch of Persian walnut (*Juglans regia* L.)**

A. Solar, M. Solar and F. Štampar

**Evaluation of walnut cultivars by advanced multi criteria response**

Z. Srdjevic, V. Kolarov and B. Srdjevic

**Application of thermal imaging for visualization of high density orchards and counting apple fruits**

by Denis Stajanko, Miran Lakota and Marko Hocevar

**A model to simulate the endodormance development in flower buds of “Atonishiki”**

**sweet cherry**

by T. Sugiura, H. Honjo and H. Sugiura

**Quantifying Inputs and Outputs of Patagonian Fruit Production Systems**

by Eduardo Daniel Cittadini

**A model coupling architectural and physiological processes to simulate effects of canopy management on grapevine growth and yield.**

by Philippe Vivin and Jean-Pierre Gaudillère

**Evaluating the Accountability of the ‘Contour Method’ for Determining Apple Tree Production Efficacy across Diverse Management Regimes**

by Harrison Wright, Doug Nichols and Charlie Embree

**Unbiased estimator for the total number of flowers on a tree**

by Dvoralai Wulfsohn, Gabriela Maletti and Torben Toldam-Andersen

**Effects of summer pruning on growth indices of two important Iranian apple cultivars “Golab” and “Shafi-Abadi” and modelling their response**

by Zabihollah Zamani, Ali Saie and Ali-Reza Talaie

**Climatic impacts on tart cherry (*Prunus cerasus* L.) production in Michigan in past and projected future time frames.**

by Costanza Zavalloni, Jeffrey A. Andresen, James A. Flore, J. Roy Black, Tracy L. Beedy, and Julie A. Winkler

**Modelling variability in fruit growth and quality development: a stochastic systems approach**

Nico Scheerlinck, Christine Franck, and Bart M. Nicolai

**Using weather generators in crop modelling**

Mikhail A. Semenov

**Plant architecture, hail nets and thermal behaviour influencing developmental rate and modelling of the codling moth**

Ute Kührt, Jörg Samietz and Silvia Dorn
