

Monitoring Winter Chill
 Dr Trevor Atkins, HortPlus

Everyone back from end of season holidays yet? A number of our clients have reported wonderful trips ranging from overseas but some of the best adventures sounded like playing tourists around New Zealand.

A perennial favorite winter activity is monitoring winter chill. To make the job easier this year, I have created base graphs showing the last three years against which you can monitor winter chill accumulations over the winter for your area. We will of course be providing updates of this critical information during the winter using HortPlus' MetWatch to do the calculations. Drop me a line if you have any questions about winter chilling or any thoughts on future Weather Sense presentations. You can also check the Frequently Asked Questions section of our website for further information on winter chill calculations.
